

## MODULAR 6-WAY VALVE

Heating and Cooling Controlled with One Valve

The Siral modular 6-way valve is a solution with two equal percentage characterized flow sequences (heating and cooling) with different Cv values that enable modulating control of each sequence individually with a single valve.

### Reduction in Components

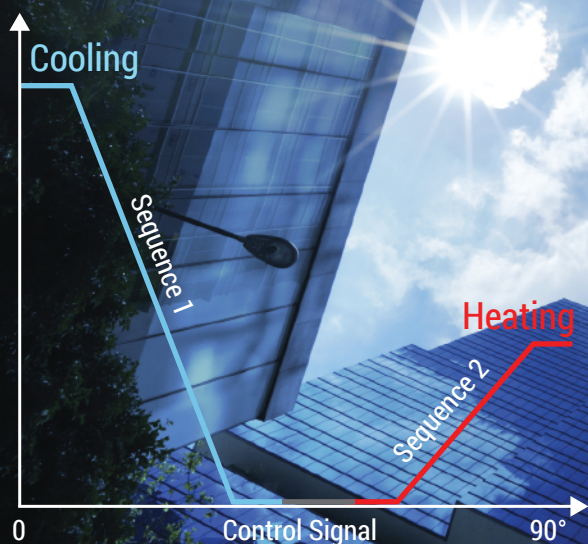

The mod-6 solution replaces the need for a change over valve for a single coil in a 4-pipe system.

### Reduced Installation Cost and Time

With the mod-6 a single coil can be used for heating and cooling. Also, only one actuator is needed for both sequences. This reduces piping, wiring and material costs.

### Two Seasons One Valve

- 2 sequences with different Cv values for heating and cooling.
- Bubble tight zero leakage
- Equal percentage

### COMMON APPLICATION

- Chilled Beams
- Fan Coil Units
- Radiant Heating
- Unit Ventilators

### SNAPSHOT

- Flow patterns: 6-way (Diverting)
- Size range: ½ to 1"
- Cv range: 0.3 to 19
- Control: Modulating (2-10VDC)

# MORE THAN YOUR REGULAR 6-WAY VALVE

Change over and modulating control for a single coil in a 4- pipe system with a single Modular 6-way Valve.

More Cv options than any other 6-way Valve.

Only 6-way valve with equal percentage characteristic flow option.
